

Dr. Steinley,

Thank you for your review my article, *Flexplot: Graphically-Based Data Analysis*. We feel the current revision is much stronger than the previous version; based on the comments of the reviewer, the usability of flexplot has been improved. I have also focused the introductory section to hone in on the unique contribution more so than my previous revision. I very much appreciate the feedback.

I am happy to report that I have addressed all concerns expressed by the reviewer. Included in this submission is a point-by-point reply to each suggestion comments. The manuscript is now 55 pages long and has 24 plots. This article is not under review for any other journal, but it has been published on the PsychArXiv (<https://psyarxiv.com/kh9c3/>). Additionally, the full source code for both the software and the manuscript is available online at Github (www.github.com/dustinfife/flexplot), and a different (but related) manuscript about the JASP version of flexplot is in press at Behavioral Research Methods.

Once again, thank you for your consideration of my manuscript.

Dustin Fife
